ABOUT

Backend Software Engineer with experience designing scalable distributed systems, enterprise integrations, and high-performance APIs using Java, Quarkus, Spring Boot, and Kotlin. Currently responsible for maintaining critical enterprise systems at Genesys Software and serving as the primary maintainer of a production payment platform, with a strong focus on software architecture, scalability, and reliability.

TECHNICAL SKILLS

Languages: Java 17/21, Kotlin, Python.
Backend Frameworks: Spring Boot, Quarkus, FastAPI.
Architecture & Engineering: Distributed Systems, Microservices, Clean Architecture, DDD, Event-Driven Design, Reactive Programming (Mutiny).
AI & LLM Integration: LangChain4j, Spring AI, LangChain, RAG, MCP, AI Agents, Tool Calling, Structured Outputs.
APIs & Interoperability: REST APIs, FHIR.
Security: OAuth2, JWT.
Databases, Persistence & Caching: PostgreSQL, MySQL, Supabase, Redis, InterSystems IRIS, JPA/Hibernate.
DevOps & Tooling: Docker, Podman, Git, GitHub Actions, Jenkins, Jira.
Testing: JUnit 5, Mockito.

PROFESSIONAL EXPERIENCE

Genesys Software – Java Backend Developer | June 2025 – Present
São José do Rio Preto, SP, Brazil

- Developed and maintained backend integrations for a corporate platform, enabling reliable and scalable communication across business domains.
- Optimized JSON serialization for payloads containing Base64-encoded images, reducing payload size by approximately 90% (2 GB to 200 MB) without data loss.
- Implemented multi-tenant authorization with fine-grained access control across multiple organizations.
- Led the implementation of a migration from a single-schema to a schema-per-tenant database architecture, improving tenant isolation and scalability.
- Implemented an event-driven workflow with Spring Application Events to automatically advance sales orders when production orders were completed.

Brasil Rural – *IT Intern* | March 2024 – April 2025
São José do Rio Preto, SP, Brazil

- Acted as the company's primary IT point of contact, coordinating priorities directly with directors and owning technical decisions across software development, integrations, and automation.
- Led the migration of 20+ legacy PHP API integrations to automated n8n workflows, completing the project in three weeks and improving operational stability.
- Led the modernization of a legacy desktop monolith into a Java and Angular web platform, covering requirements gathering, architecture, implementation, and delivery.

- Translated business requirements directly from company directors into automated technical solutions, reducing manual processes and improving the reliability of internal operations.

PROJECTS

Econolyze — *Personal Software Engineering Project* | *April 2025 – Present*

- Designed a distributed personal finance platform using Quarkus, microservices, and Clean Architecture, with a focus on transaction consistency, scalability, and separation of business rules.
- Implemented reactive transaction workflows with Mutiny and secured REST APIs using JWT-based authentication and authorization.
- Integrated an AI-powered financial assistant using LangChain4j, AI Agents, and Tool Calling to retrieve financial data and execute domain-specific operations.
- Containerized services and automated local environment orchestration using Podman.

GitHub: https://github.com/ErickMurakami/Econolyze

Genesys Payment — Contract Software Engineering Project | *January 2026 – Present*

- Led the end-to-end migration of a production payment application from .NET MAUI to Kotlin Multiplatform, redesigning the application architecture for improved maintainability and platform consistency.
- Integrated the Getnet SDK and implemented secure payment workflows covering transaction lifecycles, gateway communication, error states, and recovery scenarios.
- Owned the technical delivery of the commissioned project and currently serve as its primary maintainer, supporting production stability, issue resolution, and long-term evolution.

EDUCATION

FATEC Rio Preto, São José do Rio Preto, SP - Brazil
Technology Degree in Business Informatics | June 2026

LANGUAGES

English: Fluent (C1)
Portuguese: Native

SPEAKING

Java Day 2025 – Co-Speaker: "Practical LangChain4j with Quarkus"
